

A STROKE AFFECTS EVERYONE DIFFERENTLY!

Left-sided Stroke

(affects the right side of your body)

Right sided weakness

Speech problems

Memory deficits

(language and math)

Slow cautious behavior

Right-sided Stroke

(affects the left side of your body)

Left sided weakness

Perceptual problems

Memory deficits

(short-term and performance)

Quick impulsive behavior

In general after a stroke, you may have trouble seeing, moving parts of your body, trouble eating or drinking, fatigue, pain, numbness, and depression.
